DEEP LEARNING LAB MANUAL

B.TECH

(IV YEAR – I SEM) (2022-23)

DEPARTMENT OF COMPUTATIONAL INTELLIGENCE (AIML)

MALLA REDDY COLLEGE OF ENGINEERING & TECHNOLOGY (Autonomous Institution – UGC, Govt. of India)

Recognized under 2(f) and 12 (B) of UGC ACT 1956

(Affiliated to JNTUH, Hyderabad, Approved by AICTE - Accredited by NBA & NAAC - 'A' Grade - ISO 9001:2015 Certified)

Maisammaguda, Dhulapally (Post Via. Hakimpet), Secunderabad – 500100, Telangana State, India

Department of Computer Science & Engineering (Artificial Intelligence & Machine Learning)

Vision

To be a premier centre for academic excellence and research through innovative interdisciplinary collaborations and making significant contributions to the community, organizations, and society as a whole.

Mission

- To impart cutting-edge Artificial Intelligence technology in accordance with industry norms.
- To instill in students a desire to conduct research in order to tackle challenging technical problems for industry.
- To develop effective graduates who are responsible for their professional growth, leadership qualities and are committed to lifelong learning.

Quality Policy

- To provide sophisticated technical infrastructure and to inspire students to reach their full potential.
- To provide students with a solid academic and research environment for a comprehensive learning experience.
- To provide research development, consulting, testing, and customized training to satisfy specific industrial demands, thereby encouraging self-employment and entrepreneurship among students.

Department of Computer Science & Engineering (Artificial Intelligence & Machine Learning)

Programme Educational Objectives (PEO):

PEO1: To possess knowledge and analytical abilities in areas such as maths, science, and fundamental engineering.

PEO2: To analyse, design, create products, and provide solutions to problems inComputer Science and Engineering.

PEO3: To leverage the professional expertise to enter the workforce, seek highereducation, and conduct research on AI-based problem resolution.

PEO4: To be solution providers and business owners in the field of computer science and engineering with an emphasis on artificial intelligence and machinelearning.

Programme Specific Outcomes (PSO):

After successful completion of the program a student is expected to have specificabilities to:

PSO1: To understand and examine the fundamental issues with AI and MLapplications.

PSO2: To apply machine learning, deep learning, and artificial intelligence approaches to address issues in social computing, healthcare, vision, languageprocessing, speech recognition, and other domains.

PSO3: Use cutting-edge AI and ML tools and technology to further your study andresearch.

Department of Computer Science & Engineering

(Artificial Intelligence & Machine Learning)

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design / development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leaderin diverse teams, and in multidisciplinary settings.
- 10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multi disciplinary environments.
- 12. **Life- long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Department of Computer Science & Engineering (Artificial Intelligence & Machine Learning)

Lab Objectives:

- To introduce the basic concepts and techniques of Deep Learning and the need of Deep Learning techniques in real-world problems.
- To provide understanding of various Deep Learning algorithms and the way to evaluate performance of the Deep Learning algorithms.
- To apply Deep Learning to learn, predict and classify the real-world problems.
- To understand, learn and design Artificial Neural Networks of Supervised Learning for the selected problems and very the different parameters.
- To understand the concept of CNN, RNN, GANs, Auto-encoders.
- To inculcate in students professional and ethical attitude, multidisciplinary approach and an ability to relate real-world issues and provide a cost effective solution to it by developing DL applications.
- To provide student with an academic environment aware of excellence, written ethical codes and guidelines and lifelong learning needed for a successful professional career.

Lab Outcomes:

Upon successful completion of this course, the students will be able to:

- Understand the basic concepts and techniques of Deep Learning and the need of Deep Learning techniques in real-world problems.
- Understand CNN algorithms and the way to evaluate performance of the CNN architectures.
- Apply RNN and LSTM to learn, predict and classify the real-world problems in the paradigms of Deep Learning.
- Understand, learn and design GANs for the selected problems.
- Understand the concept of Auto-encoders and enhancing GANs using auto-encoders.

Introduction about lab

System configurations are as follows:

- Hardware / Software's installed: Intel® CORETM i3-3240 CPU@3.40GHZRAM: 4GB / Anaconda Navigator or Python and Jupyter Notebook or Google Colab.
- Packages required to run the programs: Math, Scipy, Numpy, Matplotlib,
 Pandas, Sklearn, Tensorflow, Keras etc.
- Systems are provided for students in the 1:1 ratio.
- Systems are assigned numbers and same system is allotted for students when they
 do the lab.
- All Systems are configured in LINUX, it is open source and students can use any different programming environments through package installation.

Guidelines to students

A. Standard operating procedure

- a) Explanation on today's experiment by the concerned faculty using PPT covering the following aspects:
- 1) Name of the experiment
- 2) Aim
- 3) Software/Hardware requirements
- 4) Writing the python programs by the students
- 5) Commands for executing programs

Writing of the experiment in the Observation Book

The students will write the today's experiment in the Observation book as per the following format:

- a) Name of the experiment
- b) Aim
- c) Writing the program
- d) Viva-Voce Questions and Answers
- e) Errors observed (if any) during compilation/execution

B. Guide Lines to Students in Lab

Disciplinary to be maintained by the students in the Lab

- Students are required to carry their lab observation book and record book with completed experiments while entering the lab.
- Students must use the equipment with care. Any damage is caused student is punishable.
- Students are not allowed to use their cell phones/pen drives/ CDs in labs.
- Students need to maintain proper dress code along with ID Card
- Students are supposed to occupy the computers allotted to them and are notsupposed to talk or make noise in the lab.
- Students, after completion of each experiment they need to be updated in observation notes and same to be updated in the record.
- Lab records need to be submitted after completion of experiment and get it corrected with the concerned lab faculty.
- If a student is absent for any lab, they need to be completed the same experiment in the free time before attending next lab.

Steps to perform experiments in the lab by the student

Step1: Students have to write the date, aim and for that experiment in the observation book.

Step2: Students have to listen and understand the experiment explained by the faculty and note down the important points in the observation book.

Step3: Students need to write procedure/algorithm in the observation book.

Step4: Analyze and Develop/implement the logic of the program by the student in respective platform

Step5: After approval of logic of the experiment by the faculty then the experiment has to be executed on the system.

Step6: After successful execution the results are to be shown to the faculty and noted the same in the observation book.

Step7: Students need to attend the Viva-Voce on that experiment and write the same in the observation book.

Step8: Update the completed experiment in the record and submit to the concerned faculty in-charge.

Instructions to maintain the record

- Before start of the first lab they have to buy the record and bring the record to thelab.
- Regularly (Weekly) update the record after completion of the experiment and get itcorrected
 with concerned lab in-charge for continuous evaluation. In case the record is lost inform the
 same day to the faculty in charge and get the new record within 2 days the record has to be
 submitted and get it corrected by the faculty.
- If record is not submitted in time or record is not written properly, the evaluation marks (5M) will be deducted.

Awarding the marks for day to day evaluation

Total marks for day to day evaluation is 15 Marks as per Autonomous (JNTUH). These 15 Marks are distributed as:

Regularity	3 Marks
Program written	3 Marks
Execution & Result	3 Marks
Viva-Voce	3 Marks
Dress Code	3 Marks

Allocation of Marks for Lab Internal

Total marks for lab internal are 30 Marks as per Autonomous (JNTUH.)

These 30 Marks are distributed as:

Average of day to day evaluation marks: 15 Marks

Lab Mid exam: 10 Marks

VIVA & Observation: 5 Marks

Allocation of Marks for Lab External

Total marks for lab Internal and External are 70 Marks as per Autonomous / (JNTUH).

These 70 External Lab Marks are distributed as:

Program Written	30 Marks
Program Execution and Result	20 Marks
Viva-Voce	10 Marks
Record	10 Marks

C. General laboratory instructions

- 1. Students are advised to come to the laboratory at least 5 minutes before (to the starting time), those who come after 5 minutes will not be allowed into the lab.
- 2. Plan your task properly much before to the commencement, come prepared to thelab with the synopsis / program / experiment details.
- 3. Student should enter into the laboratory with:
- a. Laboratory observation notes with all the details (Problem statement, Aim, Algorithm, Procedure, Program, Expected Output, etc.,) filled in for the lab session.
- b. Laboratory Record updated up to the last session experiments and other utensils (if any) needed in the lab.
- c. Proper Dress code and Identity card.
- 4. Sign in the laboratory login register, write the TIME-IN, and occupy the computersystem allotted to you by the faculty.
- 5. Execute your task in the laboratory, and record the results / output in the labobservation note book, and get certified by the concerned faculty.
- 6. All the students should be polite and cooperative with the laboratory staff, must maintain the discipline and decency in the laboratory.
- 7. Computer labs are established with sophisticated and high end branded systems, which should be utilized properly.
- 8. Students / Faculty must keep their mobile phones in SWITCHED OFF mode during the lab sessions. Misuse of the equipment, misbehaviors with the staff and systems etc., will attract severe punishment.
- 9. Students must take the permission of the faculty in case of any urgency to go out; if anybody found loitering outside the lab / class without permission during working hours will be treated seriously and punished appropriately.
- 10. Students should LOG OFF/ SHUT DOWN the computer system before he/she leaves the lab after completing the task (experiment) in all aspects. He/she must ensure the system / seat is kept properly.

INDEX

	Deep Learning Programs Using Python			
S. No.	Name of the Program			
1	 a. Design a single unit perceptron for classification of a linearly separable binary dataset without using pre-defined models. Use the Perceptron() from sklearn. b. Identify the problem with single unit Perceptron. Classify using Or-, Andand Xor-ed data and analyze the result. 			
2	Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets. Vary the activation functions used and compare the results.			
3	Build a Deep Feed Forward ANN by implementing the Backpropagation algorithm and test the same using appropriate data sets. Use the number of hidden layers >=4.			
4	Design and implement an Image classification model to classify a dataset of images using Deep Feed Forward NN. Record the accuracy corresponding to the number of epochs. Use the MNIST, CIFAR-10 datasets.			
5	Design and implement a CNN model (with 2 layers of convolutions) to classify multi category image datasets. Record the accuracy corresponding to the number of epochs. Use the MNIST, CIFAR-10 datasets.			
6	Design and implement a CNN model (with 4+ layers of convolutions) to classify multi category image datasets. Use the MNIST, Fashion MNIST, CIFAR-10 datasets. Set the No. of Epoch as 5, 10 and 20. Make the necessary changes whenever required. Record the accuracy corresponding to the number of epochs. Record the time required to run the program, using CPU as well as using GPU in Colab.			
7	Design and implement a CNN model (with 2+ layers of convolutions) to classify multi category image datasets. Use the concept of padding and Batch Normalization while designing the CNN model. Record the accuracy corresponding to the number of epochs. Use the Fashion MNIST/MNIST/CIFAR10 datasets.			
8	Design and implement a CNN model (with 4+ layers of convolutions) to classify multi category image datasets. Use the concept of regularization and dropout while designing the CNN model. Use the Fashion MNIST datasets. Record the Training accuracy and Test accuracy corresponding to the following architectures: a. Base Model b. Model with L1 Regularization c. Model with L2 Regularization d. Model with Dropout e. Model with both L2 (or L1) and Dropout			
9	Use the concept of Data Augmentation to increase the data size from a single image.			
10	Design and implement a CNN model to classify CIFAR10 image dataset. Use the concept of Data Augmentation while designing the CNN model. Record the accuracy corresponding to the number of epochs.			
11	Implement the standard LeNet-5 CNN architecture model to classify multi category image dataset (MNIST, Fashion MNIST) and check the accuracy.			

B.Tech -	- CSE (Computational intelligence)	R-20
12	Implement the standard VGG-16 & 19 CNN architecture model to classify multi category image dataset and check the accuracy.	
13	Implement RNN for sentiment analysis on movie reviews.	
14	Implement Bidirectional LSTM for sentiment analysis on movie reviews.	
15	Implement Generative Adversarial Networks to generate realistic Images. Use MNIST, Fashion MNIST or any human face datasets.	
16	Implement Auto encoders for image denoising on MNIST, Fashion MNIST or any suitable dataset.	,

a. Design a single unit perceptron for classification of a linearly separable binary dataset (placement.csv) without using pre-defined models. Use the Perceptron() from sklearn.

Program

```
# Single unit percetron
import numpy as np
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
from sklearn.linear model import Perceptron
df=pd.read_csv('/content/gdrive/My Drive/ML_lab/placement.csv')
X = df.iloc[:,0:2]
y = df.iloc[:,-1]
p = Perceptron()
p.fit(X,y)
print(p.coef)
print(p.intercept_)
z=p.score(X,y)
print("accuracy score is",z)
from mlxtend.plotting import plot_decision_regions
plot_decision_regions(X.values, y.values, clf=p, legend=2)
```

Exercise:

Design a single unit perceptron for classification of a linearly separable binary dataset without using pre-defined models. Use the Perceptron() from sklearn.

 $[hint-use\ make_classification()\ to\ generate\ binary\ dataset\ from\ sklearn$

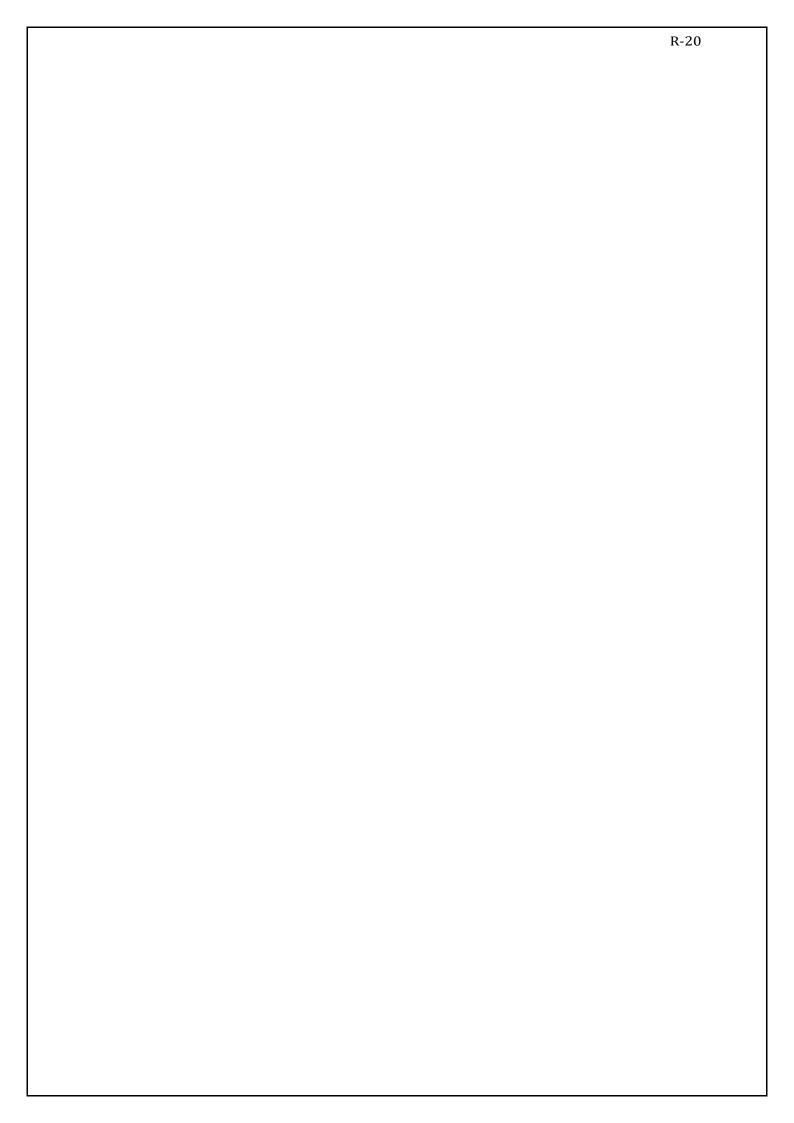

```
Eg:
```

```
from sklearn.datasets import make_classification
X, y = make_classification(n_samples=100, n_features=2,
n_informative=1,n_redundant=0,n_classes=2, n_clusters_per_class=1,
random_state=41,hypercube=False,class_sep=10)
]
```

b. Identify the problem with single unit Perceptron. Classify using Or-, And- and Xor-ed data and analysis the

Program

```
# Perceptron on Or-, And- and Xor-ed data
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
or data = pd.DataFrame()
and data = pd.DataFrame()
xor data = pd.DataFrame()
or data['input1']=[1,1,0,0]
or data['input2']=[1,0,1,0]
or data['ouput']=[1,1,1,0]
and data['input1']=[1,1,0,0]
and data['input2']=[1,0,1,0]
and data['ouput']=[1,0,0,0]
xor data['input1']=[1,1,0,0]
xor_data['input2']=[1,0,1,0]
xor data['ouput']=[0,1,1,0]
from sklearn.linear model import Perceptron
clf1=Perceptron()
clf2=Perceptron()
clf3=Perceptron()
clf1.fit(and data.iloc[:,0:2].values,and data.iloc[:,-1].values)
print(clf1.coef)
print(clf1.intercept )
x=np.linspace(-1,1,5)
y=-x+1
plt.plot(x,y)
#sns.scatterplot(and data['input1'],and data['input2'],hue=and data['ouput'],s=200)
clf2.fit(or data.iloc[:,0:2].values,or data.iloc[:,-1].values)
print(clf2.coef)
print(clf2.intercept )
x1=np.linspace(-1,1,5)
y1 = -x + 0.5
plt.plot(x1,y1)
#sns.scatterplot(or data['input1'],or data['input2'],hue=or data['ouput'],s=200)
clf3.fit(xor data.iloc[:,0:2].values,xor data.iloc[:,-1].values)
print(clf3.coef)
print(clf3.intercept )
plot decision regions (xor data.iloc[:,0:2].values, xor data.iloc[:,-1].values,
clf=clf3, legend=2)
```

	R-20
Exercise Identify the problem with single unit Perceptron. Classify using Not- and XNOR-ed data and analyze	o the result
identify the problem with single unit refreption. Classify using Not- and ANOK-ed data and analyz	te the result.

Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets. Vary the activation functions used and compare the results.

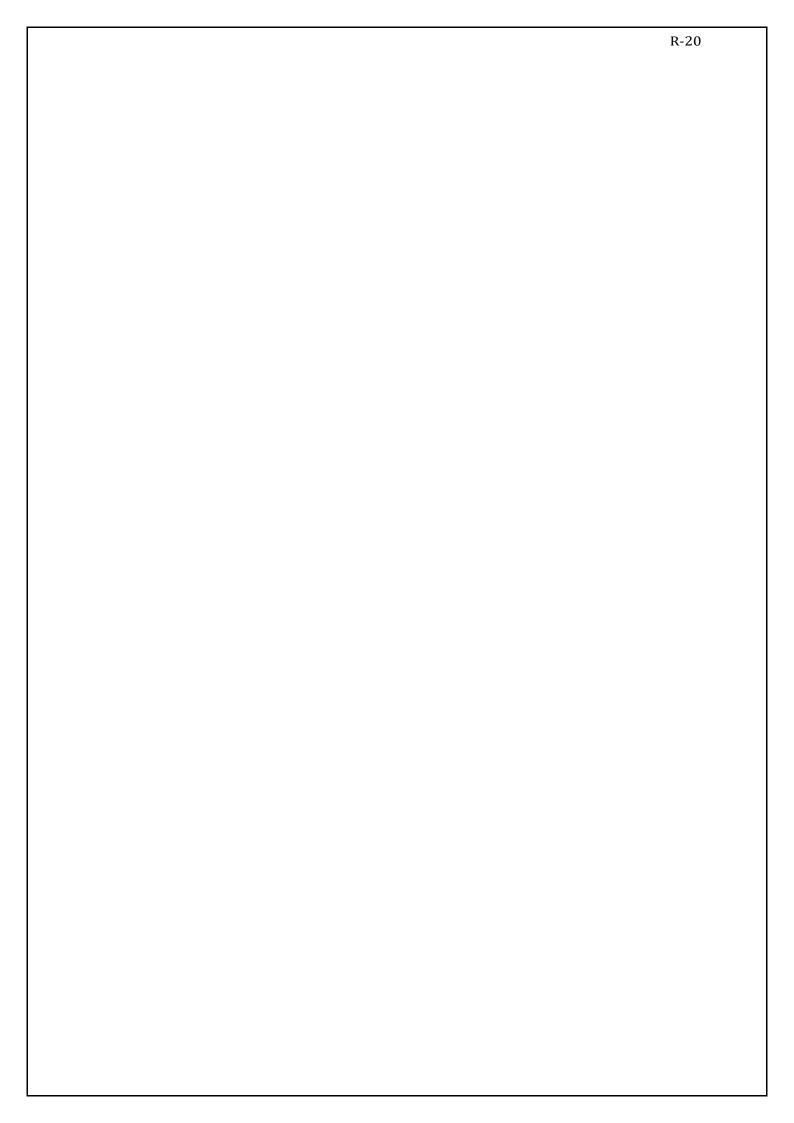

Program:

```
from keras.models import Sequential
from keras.layers import Dense, Activation
import numpy as np
import pandas as pd
from sklearn import datasets
iris = datasets.load iris()
X, y = datasets.load iris( return X y = True)
from sklearn.model selection import train test split
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.40)
# Define the network model and its arguments.
# Set the number of neurons/nodes for each layer:
model = Sequential()
model.add(Dense(2, input shape=(4,)))
model.add(Activation('sigmoid'))
model.add(Dense(1))
model.add(Activation('sigmoid'))
#sqd = SGD(lr=0.0001, decay=1e-6, momentum=0.9, nesterov=True)
#model.compile(loss='categorical crossentropy', optimizer=sgd, metrics=['accuracy'])
# Compile the model and calculate its accuracy:
model.compile(loss='mean_squared_error', optimizer='sgd', metrics=['accuracy'])
#model.fit(X train, y train, batch size=32, epochs=3)
# Print a summary of the Keras model:
model.summary()
#model.fit(X train, y train)
#model.fit(X_train, y_train, batch_size=32, epochs=300)
model.fit(X train, y train, epochs=5)
score = model.evaluate(X test, y test)
print(score)
```

Exercise:

Note down the accuracies for the following set of experiments on the given NN and compare the results Do the required modifications needed. Take training data percentage 30%, test data percentage 70%.

- b) NN model with 2 hidden layers
 - (1) Iris dataset
 - (a) No. of epochs=100,
 - (i) check accuracy using activation functions Sigmoid, Relu, Tanh
 - (ii) check accuracy using optimizer sgd, adam
 - (iii) check accuracy by varying learning rate in sgd as 0.0001, 0.0005, 5.
 - (iv) check accuracy using loss mean squared error, categorical cross entropy.
 - (b) No. of epochs =300
 - (i) Repeat the same above variations
 - (2) Ionosphere data
 - (a) Repeat the same settings as Iris

Build a Deep Feed Forward ANN by implementing the Backpropagation algorithm and test the same using appropriate data sets. Use the number of hidden layers >=4.

Program:

```
from keras.models import Sequential
from keras.layers import Dense, Activation
import numpy as np
import pandas as pd
from sklearn import datasets
iris = datasets.load iris()
X, y = datasets.load iris( return X y = True)
from sklearn.model selection import train test split
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.40)
# Define the network model and its arguments.
# Set the number of neurons/nodes for each layer:
model = Sequential()
model.add(Dense(2, input shape=(4,)))
model.add(Activation('sigmoid'))
model.add(Dense(1))
model.add(Activation('sigmoid'))
model.add(Dense(2, input shape=(4,)))
model.add(Activation('sigmoid'))
model.add(Dense(1))
model.add(Activation('sigmoid'))
model.add(Dense(2, input shape=(4,)))
model.add(Activation('sigmoid'))
model.add(Dense(1))
model.add(Activation('sigmoid'))
#sgd = SGD(1r=0.0001, decay=1e-6, momentum=0.9, nesterov=True)
#model.compile(loss='categorical crossentropy', optimizer=sqd, metrics=['accuracy'])
# Compile the model and calculate its accuracy:
model.compile(loss='mean squared error', optimizer='sgd', metrics=['accuracy'])
#model.fit(X train, y train, batch size=32, epochs=3)
# Print a summary of the Keras model:
model.summary()
#model.fit(X train, y train)
#model.fit(X train, y train, batch size=32, epochs=300)
model.fit(X train, y train, epochs=5)
score = model.evaluate(X test, y test)
print(score)
```

	R-20
Exercise: Modify the above NN model to run on Ionosphere dataset with number of hidden la percentage 30%, test data percentage 70%. No. of epochs=100, activation function l	yers >=4. Take training data Relu, optimizer adam.
	· •

Design and implement an Image classification model to classify a dataset of images using Deep Feed Forward NN. Record the accuracy corresponding to the number of epochs. Use the MNIST datasets.

Program

```
#load required packages
import tensorflow as tf
from tensorflow import keras
from keras.models import Sequential
from keras import Input
from keras.layers import Dense
import pandas as pd
import numpy as np
import sklearn
from sklearn.metrics import classification report
import matplotlib
import matplotlib.pyplot as plt
# Load digits data
(X train, y train), (X test, y test) = keras.datasets.mnist.load data()
# Print shapes
print("Shape of X_train: ", X_train.shape)
print("Shape of y train: ", y train.shape)
print("Shape of X test: ", X test.shape)
print("Shape of y_test: ", y_test.shape)
# Display images of the first 10 digits in the training set and their true lables
